This EoI is proprietary to NATGRID, and NATGRID reserves the right to recall the EoI in its entirety or in part. All responses to the EoI will become the property of NATGRID and will not be returned.

1. INTRODUCTION

1.1 Background

- 1.1.1. A number of advanced systems exist today that can scan through large number of structured & unstructured data in various formats to extract and link contextual information on a real time basis. These systems use Natural Language Processing (NLP) tools with cognitive capability to extract entities (namely Person, Event, Place, and Organization) and link each other through relationships based on domain specific ontologies and can further be visualized using analytical tools as per the operational requirement.
- 1.1.2. NATGRID is intending to set up an Entity Extraction, Visualization and Analytics (EVA) system that would collect and analyse information available from various data sources.

1.2 Implementation Plan

- 1.2.1. The EVA system is planned to be implemented through a System Integrator (SI) who would be responsible for providing the software solution, recommend hardware specification for running the solution and integrating and implementing the composite EVA solution. The SI would be required to provide software solution in the first stage along with the recommended hardware specifications. The software solution recommended by the SI would have to be implemented in the NATGRID Lab Environment to enable testing of various functionalities.
- 1.2.2. As part of next stage, NATGRID would procure the hardware based on the specifications provided by the SI. The SI would then have to integrate both the hardware and software and implement the solution. It is imperative that the EVA solution implemented by the SI should be customizable throughout its deployment lifecycle to meet the evolving requirements of the users.

1.3 Purpose of EoI

- 1.3.1. The purpose of this Expression of Interest (EoI) is to shortlist reputed Systems Integrators (SI) for the implementation of the EVA system envisaged by NATGRID. The objective of the document is to provide indicative information on the EVA project and the scope of work for this project. The detailed scope of work, terms and conditions and parameters for selection of the SI will be provided in the Request for Proposal (RFP). RFP will be provided to only those firms who have cleared security verification and shortlisted as per the pre-qualifying criteria provided in this EoI.

2. BROAD SCOPE OF WORK

 - (iii) Create and update Ontologies defining the entities, their attributes and their relationships;
 - (iv) Support multiple languages, including English and Hindi;
 - (v) Allow user to perform various types of search such as free text search, parametric search, entity-based search, and timeline based search;
 - (vi) Present information to users in visually intuitive manner in the form of network graphs;
 - (vii) Map available information on GIS interface and allow user to perform location based query;
 - (viii) Automatically generate alerts based on pre-defined rules;
 - (ix) Allow user to create custom dashboards/ reports based on their analysis;
 - (x) Integrated security features to protect the solution from external threats;
 - (xi) Create and manage Users through a User Management Interface for controlling access, enforcing rules, and auditing usage;
 - (xii) Tune system parameters and performance to improve accuracy of results.

Note: The EVA solution is to be implemented on a Big Data framework.
